

Cancellation of Therapy Due to Client Illness

Clients of OAI are *required* to cancel their therapy for the day if they are experiencing ANY one of the following criteria:

- Have a fever of over 100 degrees
- Persistent vomiting
- Persistent diarrhea
- Any currently contagious condition such as pink eye
- Recommendation from a physician that the child should not participate in therapy that day.

We ask that parents please notify the Program Director in such circumstances as soon as they know the shift will be cancelled.

We do not require children to be free of sneezing/coughing from head/chest congestion if it is at the non-contagious level.

Clients who are not ill should avoid cancelling therapy whenever possible in order to provide the level of intensity needed to maximize the chances of an optimal therapy effect.

Thank you!
